

EFFICIENCY OF USE OF THE DRUG APIZARTRON IN AFFECTIONS OF THE LOCOMOTORIUM IN THE LUMBAR PORTION OF THE SPINE

M. V. Morozov, R. N. Ambartsumov (Kiev)

Summary. A therapeutic effect has been studied of the drug Apizartron of the ESPARMA GmbH firm (Osterweddingen, Germany) in those patients presenting with damaged lumbar spine. The ointment Apizartron has been shown to alleviate the pain syndrome and myotonic (spastic) reactions, with its effect having been somewhat less pronounced on radicular compression, neurodystrophic disorders, and on the arterial blood flow of the inferior limbs. The drug is recommended for use in a complex therapy of vertebrogenic disorders of the lumbar spine.
